Gaurav Joshi

Education

Sept 2025 - Present

UCSD , MSCS

GPA: NA

– San Diego, USA

Nov 21 - April 25

IIT Gandhinagar ,Btech CSE

GPA: 8.87/10

– Ahmedabad , India

Key Skills

Python, JAX,
PyTorch, C++

DL, CV, Bayesian
ML

Django, React,
Firebase

Achievements

Research Intern Fellowship,
Purdue University (2024)

Dean's List, IIT Gn

Profile

AI/ML engineer with experience in building research-driven systems and deploying real-world applications. Skilled in computer vision, graphics, and deep learning, with a strong foundation in mathematics. Co-founded an AI startup (FluenTalk) and contributed to open-source projects, research internships, and applied ML pipelines. Passionate about translating research into scalable products.

Experience

Dec 2024 – Jun 2025

India

Co-founder, FluenTalk

- Built a voice-based **AI assistant** web app for improving spoken English, tested with 200+ students ([Website](#)).
- Implemented conversational AI using OpenAI APIs + Django backend; frontend in React.
- Deployed scalable infrastructure with **Firebase + CockroachDB**.
- Designed feedback mechanisms for grammar & fluency improvement, improving engagement and user learning outcomes.

Aug 2024 – Feb 2025

India

Research Intern, IIT Gandhinagar – ML & Theory Group

- Worked with **Prof. Anirban Dasgupta** on addressing *simplicity bias* in neural networks, a key limitation affecting **out-of-distribution generalization**.
- Proposed and evaluated methods including a modified **Feature Sieve**, **neuronal correlation penalization**, and a novel **Self-Supervised Augmentation** approach..
- Results published at **ICLR 2025 SCSL Workshop** → [Paper Link](#)

May 2024 – Jul 2024

Indianapolis, US

Research Intern, Purdue University – IDEAS Lab

- Worked on Neural Operators for simulating fluid dynamics (Navier-Stokes)..
- Developed generative models for **human motion prediction**.
- Mentored by Prof. Aniket Bera, project combined **AI + physical simulations**.

May 2023 - Aug 2023

India

Google Summer of Code - Open Astronomy

- Developed a **Bayesian inference tool** for time-series analysis of astrophysical signals using Gaussian Processes and Probabilistic ML..
- Contributed to **Stingray**, an open-source scientific ML library.
- Tools: Python, JAX, TensorFlow Probability.
